SUMMARY

Computer Science graduate (CGPA 3.61) with practical experience in AI/ML, full-stack development, and building intelligent applications. Led the development of ARdent Study, an AI-powered learning platform using Python, React, Node.js, and Neo4j, featuring OCR-based concept extraction, a knowledge graph, and 3D visualization. Eager to build intelligent, real-world solutions in an AI/ML or software engineering role.

PROJECTS

ARdent Study (AR-Powered Contextual Learning Companion)

Final Year Project • github.com/hafsamaryam08/ARdent-Study • May 2025 – June 2026

- Led a team to build an AI-powered learning platform that uses OCR (Tesseract) and the Gemini API to extract and summarize key concepts from textbook pages.
- Implemented a 3D visualizer using Three.js to overlay interactive models onto study material, enabling a more immersive learning experience.
- Built a knowledge graph using Neo4j to map relationships between concepts and generate personalized study recommendations for users.

Kaffen – Cafe & Restaurant

Web Technologies Project • github.com/hafsamaryam08/Kaffen-Cafe-and-Restaurant • December 2024 – January 2025

- Built a robust restaurant web application using PHP, Laravel, and MySQL following the MVC design pattern.
- Designed relational database schemas and migrations for efficient data management and backend operations.
- Developed user-facing interactive features including an online reservation system, blog content management, and contact form handling.

Anime Recommender System

AI course project • github.com/hafsamaryam08/Anime-Recommender-System • October 2024 – November 2024

- Built a content-based recommendation system in Python using Scikit-learn, NumPy, and Pandas on a Kaggle anime dataset.
- Applied cosine similarity to compare anime based on genres, descriptions, and synopses for accurate recommendations.
- Deployed an interactive user-facing dashboard using Streamlit to explore and query anime recommendations.

EDUCATION

Bachelor of Science in Computer Science

COMSATS University Islamabad • Sahiwal Campus • 2022 – 2026 • CGPA: 3.61/4.00

COURSEWORK

Complete Agentic AI Bootcamp With LangGraph and LangChain

Udemy • 2025 • Learned to build real-world AI agents, multi-agent workflows, and autonomous apps with LangGraph and LangChain.

Introduction to Python

DataCamp • 2024 • Covered Python basics, lists, functions, packages, and NumPy.

CS50x

edX • 2023 • Strong foundation in C, Data Structures, Algorithms, Memory Management, Problem-Solving, and Debugging.

INVOLVEMENT

Technical Team Member

GDSC • September 2023 – April 2024

- Participated in organizing developer workshops and coding events to support the campus tech community.

SKILLS

Programming Languages: Python, Java, PHP, Dart, C++

AI & Data Science: Generative AI APIs (Gemini, OpenAI), OCR (Tesseract), Scikit-Learn, NumPy, Pandas, Machine Learning Algorithms

Web & Mobile Development: React.js, React Native, Node.js, Express, Three.js, Laravel, Flutter, HTML5, CSS3, SASS, Bootstrap

Databases: Neo4j (Graph Database), PostgreSQL, MySQL

Tools & Version Control: Git, GitHub, VS Code
